

Integration With IBM® QRadar®

Delivering Rich Security Findings for AWS, Azure, Google Cloud, and Kubernetes from Sonrai Dig to IBM QRadar

Correlated intelligence from multiple sources increases the effectiveness of IBM QRadar. IBM QRadar's integration with Sonrai Dig provides identity and data intelligence. With an alert level integration, enterprises can send high impact public cloud security findings seamlessly from Dig to QRadar. The security findings provide your team with a complete view of information across your public cloud to identify the severity and urgency of an event.

How it Works

1. Integration

Connect Sonrai Dig and IBM QRadar instances using an API and AWS Lambda function.

2. Import Incidents

Automatically import alerts and display a dashboard based on Sonrai Dig incidents.

3. Alert Enrichment

Use IBM QRadar's native search capability to probe and set up alerting for Sonrai Dig incidents.

4. Seamless Visibility

Use the IBM QRadar platform for a single view including high impact reporting and incidents from Sonrai Dig.

Integration Features & Benefits

Gain Comprehensive, Centralized Visibility

- Sonrai Dig delivers comprehensive public cloud security findings to IBM QRadar.
- Sonrai Dig enables QRadar to gain centralized visibility into security concerns across a multi-cloud deployment.

Provides Rich Public Cloud Security Findings

- Sonrai Dig provides rich public cloud identity, data, and platform risk findings to IBM QRadar.
- IBM users benefit from the ability to leverage QRadar analytics in conjunction with Dig's rich identity and data governance data.

Answer Important Questions

- Who has accessed resources and data?
- Who can access workload data and their components?
- Does the configuration properly protect data if a credential is stolen or misused?

Assess Policy Change Risk

- Relentlessly monitor configuration drift against an approved baseline.
- Strong audit capabilities of changes to configuration and data access.

Why Sonrai Security

Easy Consolidation

Integration with Sonrai Security is quick and easy using as AWS Lambda function and API integration. Onboarding is straightforward and focused on increasing your team's productivity.

Breadth of Resources

The intelligence gathered by Sonrai Dig on your public cloud gives your organization the highest level of visibility into your identity and access risk.

Focus on Meaningful Alerts

The alerts that are delivered by Sonrai Dig help your team by providing additional context and allow your team to rank based on urgency.

Mitigate IAM Risk

The combination of QRadar and Sonrai Dig enables organizations to streamline incident management and correlate security alerts across your public cloud so that your enterprise can mitigate risks effectively.
