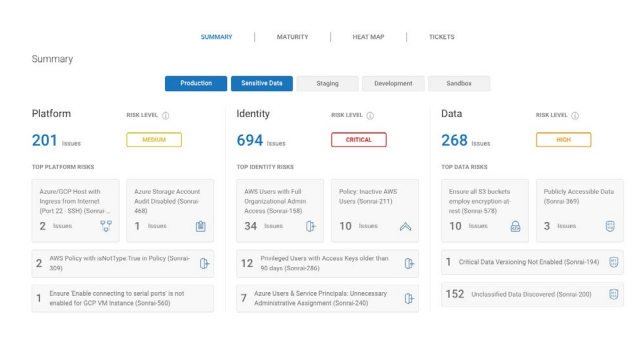
Sonrai Dig on Microsoft Azure

Understand your security posture, unearth identity risks, and lock down sensitive Data.

Start with platform security and end with a comprehensive plan to improve your security maturity. In addition to providing platform configuration monitoring, Sonrai Dig's patented graphing technology can see every path that every Azure AD identity has to sensitive data. Go beyond security principal-role-resource relationship paths and see the effective permissions for every user and service principal. Classify and tag your sensitive data and enforce your protection protocols, using remediation bots to lock down issues instantly. While Sonrai is protecting your Azure resources, it's also charting your progress towards security goals - so you can gauge how well you're enforcing a compliance framework, or how close you are to enforcing a security principle, like least privilege.



Available on Microsoft Azure Marketplace

Increase Visibility into Azure Workloads

- Cross-subscription configuration checks for possible data exposure from poor usage of configuration and trust relationships
- Automated alerts for over-privileged identities and compute
- Timely notification of high risk workloads, network, and resource configurations

Address Identity and Data Governance Concerns

- Who has accessed sensitive resources and data?
- Who can access Azure workload data and their components?
- Does the Azure AD configuration properly protect data if a credential is stolen or misused?

Secure Azure Data Stores & Support More Services

- Data stores including Storage Accounts, Microsoft SQL, and more
- Compute including VM, Azure Functions, and more
- Other services including Azure Key Vault, networks, load balancers, firewalls, and more
- Full Integration into Azure Sentinel for comprehensive incident management across the entire cloud

Assess Azure Policy Change Risk Auto-remediation

- Continually monitor configuration drift against an approved baseline
- Integrated use of Azure resource tags to align risk with-workload classifications
- Strong audit capabilities of changes to configuration and data access

Ready to graph, identify, and monitor identities and data inside your AWS? Request a demo today.
